REASONS FOR ALLOWANCE

Claims 1, 4-8, 10-13, 17-23 and 25-27 are allowed. The following is an Examiner's statement of reasons for allowance:

Independent claim 1 of the present application teaches a decoding method comprising: decoding information received at a network device by applying a first algorithm iteratively decoding until a stopping criterion is reached; and further decoding the information using a second algorithm different than the first algorithm, wherein the information comprises a low density parity check codeword, and wherein further decoding using a second algorithm comprises: identifying one or more check nodes having lowest metrics after the stopping criterion is reached, identifying at least one of a bit node or edge having lowest metrics and associated with each identified check node, and assessing parity relationships for the identified at least one bit node or edge. The foregoing limitations are not found in the prior arts of record. Particularly, none of the prior arts of record teach nor fairly suggest, "...decoding information received at a network device by applying a first algorithm iteratively decoding until a stopping criterion is reached; and further decoding the information using a second algorithm different than the first algorithm, wherein the information comprises a low density parity check codeword, and wherein further decoding using *a second algorithm comprises: identifying one or more check nodes having lowest metrics after the stopping criterion is reached; identifying at least one of a bit node or edge having lowest metrics* and associated with each identified check node, and assessing parity relationships for the identified at least one bit node or edge."

Independent claims 11, 18 and 25 include similar limitations of independent claim 1 and therefore are allowed for similar reasons.

Art Unit: 2112

Dependent claims 4-8, 10, 12, 13, 17, 19-23, 26 and 27 depend from allowable independent claims and inherently include limitations therein and therefore are allowed as well.
